

The DSV Technology for the Deeper Observation of Small Objects

Welcome to the DSV Quiet Preparation Space, a dedicated area for self-organisation and for settling the mind prior to entering the DSV Chamber (the room down the corridor).

D S V Technology - INSTRUCTIONS FOR USE:

Introduction

The *DSV* is a kind of magnification technology for the enhanced observation of small objects. The system employs synaesthetic and subtle-energetic principles in the organisation of audio-visual energy-patterns that are designed to direct the sensorial-mind toward a particular state. One that is particularly receptive to the information patterns in macro objects small enough to fit in the palm of the hand, for example a nail-file, a lipstick or a cigarette lighter.

The *DSV* incorporates an *ultra-specific protocol*. A serious commitment to this protocol is necessary for a successful application of the technology. Interested participants may, therefore wish to take the time, here in the quiet-preparation-space, to thoroughly assimilate the details of the following instructions before engaging its use:

Please turn off all mobile telephones at this point.

Users of the D S V Technology each bring their own small objects for observation into the DSV Chamber. (maximum 1 object per person)

Objects small enough to fit in the palm of the hand may be brought into the DSV Chamber for observation. These might include for example a bank-card, spectacles or a key-fob.

Only 5 people at most enter the DSV1 Chamber at any one time.

Use of the DSV1 is precisely every hour, on the hour. Duration of use = 20mins (including 7 mins observation time). Participants self-organise using the sign-up sheets on the table here in the quiet-preparation space.

The 5 self-organised participants leave the quiet-preparation-space **exactly on the hour** to enter the DSV1 Chamber. This should take one minute, therefore time of arrival in the DSV Chamber should be 1minute past the hour, whereupon the machine will activate

IMPORTANT - *Complete silence* is required by each participant from the point of departure here and through to the completion of the process.-

Once inside the DSV Chamber, participants seat themselves around the Circle-Platten whereupon they are voice-guided through each stage of the process.

Participants keep their hands *outside of the Circle Platten* until voice-guide indicates the time to place objects into the Circle for a 7 minute period of observation.

When deep-observation is complete the machine will sound the chime indicating that the session has ended, whereupon participants should take a few minutes to mentally transition out of their observation-state, after which, each collects their object and slowly exit the chamber.
